Java Coding Standards

Parts of coding standards which have not been covered in this file can be found in "java code conventions.pdf", which is standard convention for java provided by Oracle. It is extra important to follow parts "6 – Declarations", "7 – Statements and "9 – Naming Conventions"

Code Source

Do not use any libraries or code from external sources without prior approval.

1- Similar code may already exist
2- Legibility and reusability can be issue
3- Performance concerns

Libraries and Frameworks

Installation of libraries or frameworks should be well documented with related links.

Usage of Static Variables and Classes

Static keyword should be avoided as much as possible because of the confusion it can create in project.
